THE ECO STRIPPER

SPRAY MAINTENANCE SYSTEM

Galvanize deposits on roll forming equipment is a constant problem. Removing this build up required wire brushing of affected parts. Eventually a solvent oil was used to free the galvanize from the rolls. However, the solvent oils were petroleum based and extreme care needed to be exercised when disposing of this product.

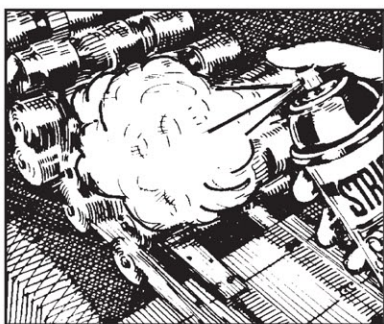

THE ECO-STRIPPER is a degalvanizer that strips the build up from roll forming equipment with ingredients that are derived from renewable resources. As effective as the original Stripper spray, the plant derived solvents of The Eco-Stripper are classified as "readily bio-degradable" so waste can be processed much more quickly.

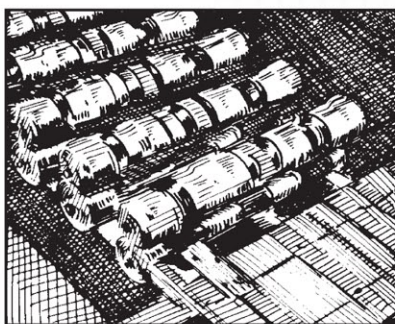

Ordering Information

Item #	Code	Description	Quantity	Weight per carton (lbs.)
27148	ES	Eco Stripper Bio-Degradable Spray	12 per ctn.	14

Here's How:

1. Spray The Eco Stripper at those points where galvanizing tends to build up on your machines. The special cleaning ingredients get right to work softening up deposits.

2. Under normal conditions, galvanizing build-up will loosen and flake off by itself after being sprayed with The Eco Stripper.

3. Then if required, remaining build-up can easily be removed by light scraping.
